## Add Power to European Engines with K&N's Apollo Universal Cold Air Intake System

K&N Engineering has released a new Universal "Cold Air Intake System ([RC-5052AS](#)) called The Apollo. Its closed system is designed to eliminate hot air problems and provide the benefits of an open cone filter and standard air box in one unit.

K&N's RC-5052AS Universal Cold Air Intake System

If a vehicle is going slow open cone filters tend to draw in hot air due to lack of cold air flow within the engine compartment. The Apollo's specially designed shape has a removable cold air feed attachment with an aluminum end cap. This allows cooler outside air to be fed into the unit.

"The Apollo has a breather hole and is supplied with a blanking plug," Sue Holgate-Williams of K&N Filters (Europe) LTD. "It has various adaptors for vehicles with engine breather vents."

Bench air flow test have been conducted and power gains have been consistent under most driving conditions. Rolling road test with the Apollo ([RC-5052AS](#)) also show positive power gains. It is ideal for normally aspired engines up to 250BHP and turbo engines up to 350BHP.

The K&N Apollo comes with a standard 70mm flange with a range of optional stepped silicone adaptors (60-70mm, 70-70mm and 80-70mm). The accessories also include a 70mm hose. There are also saddle bracket assemblies available to mount the Apollo unit.
